A sound environment for work

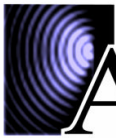

In today's design-oriented world, acoustical products need to do more than function. They are expected to complement, and even enhance interior spaces. That's why ArtUSA Industries is continually designing solutions with the results and look our clients are looking for. We offer a variety of impressive styles and colors. Our wall and ceiling panels are attractive and versatile, and include foam fabric-wrapped and metal panels. ArtUSA Noise Control Products, Inc.

helps solve office noise issues in new and existing facilities with cost-effective, long-lasting and easy to install enclosures, ceiling tiles, wall panels, baffles, and other acoustical solutions. High levels of background noise and reverberation or echo hinder and interrupt workflow. So, what's the solution? ArtUSA Industries affordable acoustic and sound control solutions are the proven answers to help offices sound better and work smoother. Lightweight and easy to suspend from high, open ceilings using traditional hanging or innovative cable suspension systems baffles absorb sound from all directions to reduce reverberation in large open office areas. Baffles are offered in a variety of standard and custom colors to complement or match school colors. Fabric-wrapped wall panel absorbs up to 85% of the sound directed toward it. They are available in hundreds of fabrics to complement new or freshen up existing color schemes. Ceiling tiles with a backer board drop into a standard grid system and help block sound traveling from adjacent rooms. Tiles without a backer board can be adhered to any wall or ceiling surface making them ideal for rooms without a grid system or those with low ceiling heights.
